

Turning Science Into Policy

*– your research as a significant driver of
national and international policy development*

If you want your research to have a positive impact on the evolution of national and international policies, you will need to do more than present at conferences and publish in journals. These seminars will provide guidance on what works and what does not work.

5th Feb – policy, strategy, action plans, impact assessment

12th Feb – why and how governments evolve policies

19th Feb – inputs into government policy making

26th Feb – interactions between science and government policy

5th Mar – why don't Ministers take action on my brilliant advice?

12th Mar – other contributions from science to government policies

19th Mar – contributing your research to international policy

26th Mar – your one-minute message

*These are seminars, your contributions
are welcome, to compare and contrast
from experience in your country.*

John Palmer is a former adviser on tropical forestry, natural resources and environment research to the Select Committees on Science and Technology and on the Environment of the Parliament of the United Kingdom.

Everyone is welcome

**Forest Sciences Centre, Room 1220
Wednesdays from 4-5pm
starting February 5.**
